## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 8 provides for the use of a fructan polycarboxylic acid, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 8 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 1751

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Besemer et al, US 5,326,864.

Besemer et al teach polycarboxy compounds based on polysaccharides (see abstract). Polycarboxyinulin is prepared having calcium complexing properties (col. 7, claim 1). These compounds are used as replacements for phosphates in detergents (see abstract). Besemer et al do not specifically teach a method for removing contaminants from textiles, however, as the compounds of Besemer et al are designed for use in laundry detergents, removing contaminants from textiles would necessarily result from the use of such a detergent.

5. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Verraest et al, US 5,777,090.

Verraest et al teach carboxymethyl inulin having calcium complexing properties (col. 7, claim 1). These compounds are used as scale inhibitors in the washing of laundry (col. 1, lines 28-30). Verraest et al do not specifically teach a method for removing contaminants from textiles, however, as the compounds of Verraest et al are designed for use in laundry detergents, removing contaminants from textiles would necessarily result from the use of such a detergent.
